

ABEL AMARE

SOFTWARE ENGINEER

Woldia, Ethiopia | +251 945 340 103 | abelamaremain@gmail.com
github.com/abelamare | linkedin.com/in/abelamare

PROFILE

Software Engineering graduate with hands-on experience building production-ready full-stack systems. Built a SaaS legal case management platform using Flutter, Node.js, and React, and a cooperative financial platform using Spring Boot, Next.js, and PostgreSQL. Comfortable across database schema design, REST APIs, mobile interfaces, and CI/CD pipelines. Seeking a backend, full-stack, or mobile engineering role.

PROJECTS / WORK EXPERIENCE

LegalCase — SaaS Legal Practice Management Platform

2023 – 2024

Independent Project

Flutter · Dart · Node.js · TypeScript · Express · PostgreSQL · Knex.js · React · Vite · JWT · Chapa · Docker · GitHub Actions

- Built a cross-platform Flutter mobile app for Android and iOS with 15+ screens, Riverpod state management, and go_router navigation.
- Designed a Node.js and TypeScript REST API with 40+ endpoints, role-based access control for lawyers and admins, and subscription guard middleware returning 402 when a trial expires.
- Integrated Chapa for subscription checkout with free-trial enforcement and grace-period expiry through a daily cron worker.
- Implemented alarm-style hearing notifications using flutter_local_notifications with USE_EXACT_ALARM and a BOOT_COMPLETED receiver, allowing reminders to fire after app termination or device restart.
- Delivered a React and Vite admin panel with revenue charts, lawyer management, broadcast notifications, and an audit log with a detail modal.
- Used 18 database migrations, a monorepo architecture, and a GitHub Actions CI pipeline.

Cooperative Management System — Full-Stack Financial Platform

Sep 2023 – Oct 2026

Final Year Graduation Project, Woldia University

Java 17 · Spring Boot 3 · Spring Security · JWT · Spring Data JPA · PostgreSQL · Flyway · Maven · Next.js 14 · TypeScript · Redux Toolkit (RTK Query) · MinIO

- Architected role-based access control with Spring Security and JWT across five roles: Manager, Loan Officer, Accountant, Auditor, and Member.
- Built a FIFO loan lifecycle engine covering Apply, Approve, Collateral, Disburse, Repay, and Paid Off, with two-level skip workflows and four collateral types including LTV-adjusted fixed-asset coverage.
- Implemented a dual-write financial ledger in which every transaction writes to the member account and cooperative general ledger in the same database transaction.
- Designed a versioned system configuration table so each transaction locks the configuration active at that time and later policy changes do not alter historical records.
- Integrated MinIO object storage with presigned URL generation for collateral files, member KYC documents, and loan agreements.
- Delivered paginated financial reports with real-time PostgreSQL aggregation optimized for large datasets.
- Built approximately 25 REST controllers, 24 Flyway migrations, 40 frontend pages, and a complete audit trail on every action.

EDUCATION

Bachelor of Software Engineering

Jan 2022 – Expected Oct 2026

Woldia University, Woldia, Ethiopia

TECHNICAL SKILLS

Languages: Java, TypeScript, Dart, JavaScript, SQL

Frameworks: Spring Boot 3, Spring Security, Node.js, Express, Flutter, Next.js 14, React, Redux Toolkit

Databases: PostgreSQL, Knex.js, Spring Data JPA, Flyway

Tools: Docker, Docker Compose, GitHub Actions, MinIO, Git, JWT, REST APIs

Concepts: RBAC, layered architecture (Controller/Service/Repository), ORM, pagination, query optimisation, CI/CD

LANGUAGES

Amharic — Native | English — Proficient
